

MANUFACTURERS OF ATLAS® AND N-DEX® HAND PROTECTION

SOLUTION BASED HAND PROTECTION

#1049945

HI-VIZ

#1075727

ANSI LEVEL 5 CUT PROTECTION

#1012075

SUPERIOR CHEMICAL PROTECTION

FASTENAL®

One Program. Three Solutions.

MANUFACTURERS OF ATLAS® AND N-DEX® HAND PROTECTION

- Easy to use, online resource
- Helps customer determine which glove to use in specific chemicals
- Helps to reduce possibility of injury
- Extends wear resulting in savings

- Easy to use, online resource
- Helps customer select proper cut resistant glove
- Helps to reduce cut injuries
- Explains differences in cut levels: ANSI vs EN

SENTINEL

- Helps eliminate workplace hazards
- Application specific assessment of the workplace
- Documented cost savings
- Consolidation
- SKU Reduction
- Assist in glove controls
- Help meet OSHA Requirements: 29CFR 1910.138

TECHNICAL GLOSSARY

POLYMERS

Naturally occurring and man-made polymers are essential building blocks of hand protection. Specific polymers protect workers from specific hazards. There is no ideal glove that works in every situation. Showa Best Glove utilizes a variety of polymer coatings and fabrics, designed for a variety of tasks.

NATURAL RUBBER

Natural Rubber, the most elastic substance known is found in over two hundred plants including the rubber tree (*Hevea Brasiliensis*), the source of natural rubber latex used to manufacture some Showa Best gloves.

Natural rubber is a flexible and soft, yet tough and durable coating that provides excellent protection from physical hazards and provides an outstanding grip. Natural rubber provides excellent protection from exposure to aqueous chemicals such as acids and caustics, and limited protection from alcohols and ketones. Natural rubber gloves do not hold up well in organic solvents, oils, greases or fuels such as kerosene or gasoline.

CAUTION: Natural rubber latex has been shown to cause allergic reactions in sensitized individuals.

NEOPRENE (*Polychloroprene, CR*)

Strong, durable Neoprene gloves provide excellent protection from physical hazards such as cuts and abrasions and also provide excellent chemical resistance for protection from exposure to organic and inorganic acids. Neoprene gloves

also provide excellent protection from many organic solvents, oils, greases and petrochemicals and resist degradation from ozone, sunlight and oxidation. In addition, Neoprene remains functional and flexible at temperatures ranging from -10° to 300° F (-23° to 150° C).

NITRILE (*Acrylonitrile-Butadiene Rubber*)

Nitrile, a versatile synthetic copolymer, is used to make a variety of gloves ranging from heavy-duty work gloves to ultra-thin medical and clean room gloves. Nitrile coating provides tough protection from physical hazards such as cut, puncture or abrasion. Nitrile dipped gloves also provide chemical resistance to petrochemicals (especially fuels), oils, greases, pesticides and other agricultural chemicals while providing excellent dexterity.

PVC (*Polyvinyl Chloride*)

PVC is an economical synthetic thermoplastic polymer that is exceptionally durable. PVC gloves provide excellent protection from limited chemical exposure and physical hazard protection. They are noted for being durable and function well in temperatures ranging from -30° up to 212° F (-34° up to 100° C).

BUTYL (*Butyl Rubber*)

Butyl Rubber's tight molecular structure provides excellent chemical resistance to gases and ketones. Butyl gloves are manufactured in unsupported version only and are used by the military for protection from chemical warfare agents. Butyl rubber is severely

affected by exposure to fuels and aliphatic and aromatic hydrocarbon solvents.

VITON® (*Fluoroelastomer*)

Viton provides excellent chemical resistance to fuels used in the aerospace industry. It provides excellent protection from exposure to aromatic hydrocarbons such as benzene, toluene or xylene. Viton gloves are available in unsupported version only. For working with extremely hazardous chemicals such as carcinogenic or highly toxic chemicals, Viton works where no other glove works.

POLYMER COMBINATIONS FOR THE BEST OF BOTH WORLDS

Certain combinations of polymers are used to make hybrid gloves. Neoprene over natural rubber latex is used in Best® Chem Master™ gloves. Viton over Butyl is used to make the highly chemical resistant Best® Viton® II glove. Nitrile is used as an overdip in several Showa Best natural rubber gloves to provide added resistance to aging, ozone and chemicals.

CUFF DESIGNS

Knitwrist: designed to keep glove firmly in place, prevents debris from entering glove, enhances warmth, should not be used where quick glove removal is needed.

Safety Cuff: allows glove to slide on and off easily, helps protect wrist, releases quickly from hand, won't soften when exposed to perspiration or washing.

Gauntlet: provides additional protection for lower forearm, allows maximum forearm dexterity, lets glove slide off easily, protects wrist, releases quickly from hand.

Note: Unsupported gloves may have a rolled cuff, a serrated cuff or a straight cuff.

Color Coded Cuffs: Many of our styles have color-coded cuffs for easy size identification and pairing after laundering.

GRIP DESIGNS

Supported gloves

TEXTURED GRIP

BREATHABLE VINYL

WRINKLE FINISH

ROUGH NITRILE

SPONGE NITRILE GRIP

Unsupported gloves

BISQUE FINISH

TRACTOR TREAD

SMOOTH FINISH

NOTE: Some Showa Best gloves have no special grip design, yet still provide good gripping power due to the intrinsic properties of the particular glove polymer.

Flat Dipped Technology: The process where various polymers are dipped onto a seamless liner to form a palm coating. This coating enhances grip, dexterity, and puncture and abrasion resistance. The open back design on flat dipped gloves also allows hands to breathe and increases flexibility.

Disposable Gloves: This category of unsupported gloves is generally characterized as a thin-gauge glove that is not intended for repeated use. They may have a donning agent such as powder or may be powder-free.

Laminated Gloves: This special nitrile-coated fabric is made by transfer-coating the nitrile polymer onto a textured surface and then laminating the nitrile film onto Sanitized® poly-cotton fabric for superior comfort and flexibility.

Impregnated Gloves: This special nitrile or PVC-coated fabric is made by knife-coating nitrile or PVC directly onto Sanitized® cotton fabric.

Supported Gloves: These gloves offer a polymer coating over a cotton, nylon or Kevlar® liner. The textile substrate imparts added strength and resistance to abrasion, cuts and punctures.

Unsupported Gloves: These are polymer gloves with no textile lining. These gloves include heavyweight, medium weight or disposable gloves. They may be chlorinated or have a cotton flock lining for easier donning.

Cut Resistant Gloves: This special category is characterized by the utility of the gloves and includes either polymer coated gloves or special high performance yarns that are designed to impart cut-resistance or combinations of these.

GLOVE SIZE CHART

Glove Size	XS	S	M	L	XL
Hand Size	6-7	7-8	8-9	9-10	10-11

Sizing: Use a tape measure to find the circumference of your hand around the palm area. This is close to your actual glove size. For example, 7" is equal to a size 7 glove. Sizes can vary among different manufacturers and styles. For easy size comparison, refer to the above chart and note color coding.

Mil Thickness: 1 mil = 1/1000 of an inch

ADDITIONAL TECHNICAL SERVICES

TRIAD – ONE PROGRAM THREE SOLUTIONS

Showa Best Glove's TRIAD program offers the maximum assistance in protecting workers from Hand Injuries. Whether it be Protection from Cuts, Abrasions, Punctures or Hazardous Chemicals, we offer the highest standards of consultation by our team of hand protection professionals. With our latest innovations in protective products, technical support and professional glove surveys, we are here to assist you in protecting your workers by reducing hand injuries and providing insight in cost savings with the very best in Hand Protection.

WWW.CHEMREST.COM

Showa Best Glove's CHEMREST.com is the website dedicated strictly to selecting gloves for chemical resistance. This user-friendly website contains ASTM and EN compliant chemical resistance data for several thousand chemical tests and includes the following features:

- Several hundred pure chemicals or chemical mixtures tested
- Various Showa Best gloves tested including new styles
- ASTM test methods for two levels of exposure, heavy and intermittent
- ASTM F739-96 Standard Test Method for Permeation by Liquids or Gases Under Conditions of Heavy Continuous Exposure where glove materials are totally immersed in the test chemicals for eight hours
- ASTM F1383-96 Standard Test Method for Permeation by Liquids or Gases Under Conditions of Intermittent Contact where glove material is exposed to the test chemical intermittently
- Degradation testing at four time intervals
- EN 374 ratings for permeation breakthrough time
- Toxicity and risk information for several hundred chemicals
- NFPA health, flammability and reactivity for several hundred chemicals
- International Agency for Research on Cancer status for each chemical
- American Conference of Governmental Industrial Hygienists "Skin-Notation" chemicals are noted
- Environmental Protection Agency's "Extremely Hazardous Chemicals" are noted
- Pictures of each glove with complete information on ordering and uses
- Search the Website by chemical name or CAS number
- E-mail technical questions to Showa Best Glove Technical Services or contact your Best representative in your national or international area
- Print out chemical resistant table to your printer for each chemical
- Linked to showabestglove.com

CUSTOMIZED CHEMREST™ TESTING

Under certain conditions, we can use our state-of-the-industry permeation testing equipment to analyze the particular chemical or chemical mixture from which you're seeking protection to help you determine which Showa Best Glove chemical-resistant glove you should use. Call 800-241-0323, for more information. Some testing procedures are subject to a modest service fee. Quotations offered upon request.

WWW.CUTREST.COM

Showa Best Glove's CUTREST.com, our latest website, is totally dedicated to protecting workers from injuries involving handling sharp objects in the workplace. ANSI Cut Levels based on ASTM F1790 Cut Resistance Testing and EN 388 Cut Resistance Performance Index Levels are presented. Gloves are ranked in order of preference based on the results of International Cut Resistance Testing Standards. Educational Information is provided on Kevlar®, Dyneema®, HPPE, Hagane Coil® Technology and Engineered Fibers for ease of product selection. A product comparison feature simplifies the selection process based on cut Level, coating, hazards and material construction.

TERMS AND CONDITIONS

LIMITED WARRANTY & DISCLAIMERS

Showa Best Glove warrants only that gloves manufactured by Showa Best Glove will be free from defects in materials and workmanship at the time of manufacture. This limited warranty expires one (1) year after shipment. This limited warranty is exclusive and in lieu of all other warranties, express, implied, or statutory. Showa Best Glove's entire obligation and the exclusive remedy to any party for breach of this limited warranty shall be limited to replacement or refund of the original purchase price of the product, at Showa Best Glove's option, and subject to customer's compliance with Showa Best Glove's Returns policy. Showa Best Glove's limited warranty shall not apply, however, to SBG gloves that have been subject to misuse, accident, or negligence during service, handling, or storage.

DISCLAIMER OF IMPLIED WARRANTIES

All implied warranties which may arise by implication of law or application of course of dealing or usage of trade, including, but not limited to, implied warranties of merchantability or fitness for a particular purpose, are expressly excluded. There are no warranties which extend beyond the description on the face hereof. The end user is solely responsible for the suitability of the glove selection for a particular application.

FORCE MAJEURE

Showa Best Glove shall not be liable for delay in or failure to perform any of its obligations if the delay or failure results directly or indirectly by Force Majeure. "Force Majeure," as used herein means any law, order, regulations, or government action; failure or delay of transportation; suspension or cancellation of any required license(s); insurrection, riots, national emergencies, war, acts of public enemies, strikes or other labor difficulties; inability to obtain necessary labor, manufacturing facilities, materials or components from Showa Best Glove's usual sources; fires, floods or other catastrophes; acts of God or any cause of like or kind beyond our control.
