NEW FOR 2017!

Comfort Hyde™ leather

WHAT IS COMFORTHYDE™?

ComfortHyde™ is our special formula leather tannage that makes this leather feel as soft, supple and luxurious as more expensive deerskin leather. ComfortHyde™ leather is less costly than deerskin, yet offers 70% better wear performance over deerskin. Wear performance is defined as abrasion resistance to friction, the chief reason leather wears out!

ComfortHyde™ adds WOW to leather tannage!

HYDRAHYDE® LEATHER

HydraHyde® leather

WHAT'S HYDRAHYDE®?

HydraHyde® is our patent pending specially tanned leather that is both water resistant and breathable.

And that's good because?

Standard glove leathers absorb water and perspiration. When they do, they get hot and uncomfortable. When they dry out, they get stiff and boardy, never to regain their original natural feel. And who wants that!

Wells Lamont HydraHyde® leather

- Stays Drier
- Stays Softer
- Breathes Better

This means improved comfort and wear over the life of the leather!

DOES IT REALLY WORK?

We've tested it through the BLC, or British Leather Centre, world-renowned institute for leather research and testing. So for the technical stuff note:

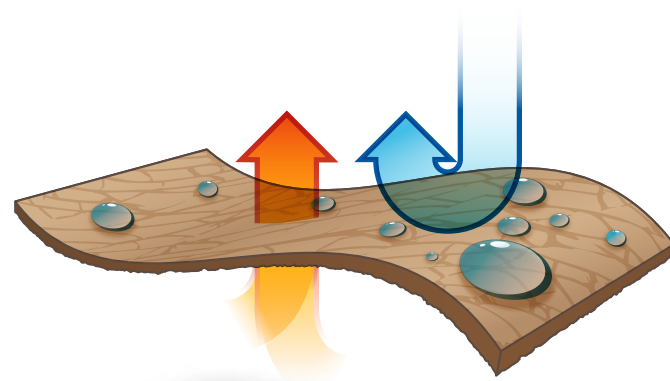

BSEN 420.2003 Sec. 4.2 Water Penetration / Water Resistance Test – We passed with a maximum level 4 water resistance rating.

BSEN 420.2003 Sec 5.3 Water Vapor Transmission / Breathability Test – We passed this one too exceeding minimum requirements by over 200%.

SO, HOW DO WE USE IT?

Well, we could have used it by developing extra fancy work gloves with lots of extra costs, but we didn't. Instead, we took our tried and true work glove designs, added a few tweaks, and swapped out that old water absorbing leather with our new HydraHyde® leather.

What we get then is a good trusty work glove that is:

1201 UPDATED FOR 2017

COATED

WLL HydraHyde® waterproof / breathable

WHAT'S HYDRAHYDE®?

It's our trademark for waterproof glove products. And these coated gloves are unique, developed from a proprietary and patented process that makes a glove shell from a waterproof & breathable shell fabric, then palm coats it to seal the seams.

This means waterproof protection for you, but with the breathable function of the waterproof shell fabric, your hands will not get as hot and uncomfortable as they would with non-breathable gloves.

The nitrile coating offers great grip, great wear performance, and all the quality that you would expect from a Wells Lamont glove.

SOME SUGGESTED USES:

- Wet & Muddy Yard & Garden Work
- Cleaning Gutters
- Cement & Mortar Work
- Plumbing
- All Round DIY Projects Wet or Dry
- Suitable For Professional or Home Use

590

PREMIUM LEATHER GLOVES

AT WELLS LAMONT, WE CHOOSE OUR LEATHER CAREFULLY...

All work glove leather is not the same, and neither are all leather work gloves. Each leather and leather glove have their own characteristics. What we have illustrated is a quick series of lessons that define these characteristics and where and how they be best used.

THE RIGHT HIDE FOR THE JOB

GRAIN COWHIDE

- Most commonly used of the grain leathers
- Commercially raised, most readily available
- Good abrasion resistance

SPLIT COWHIDE

- Most used, cost effective and versatile of work glove leathers
- High fiber density equates to high abrasion resistance and strength

GRAIN DEERSKIN

- Naturally soft and flexible
- Not commercially raised
- Highest cost of glove leathers
- Moderate abrasion resistance

SPLIT DEERSKIN

- Most flexible of all work glove leathers
- Not commercially raised or as readily available
- Poor abrasion resistance
- Ideal for insulated gloves

GOATSKIN

- Dense fiber structure that retains good strength for a thinner leather
- Good tensile strength
- Perfect for medium duty jobs

PIGSKIN

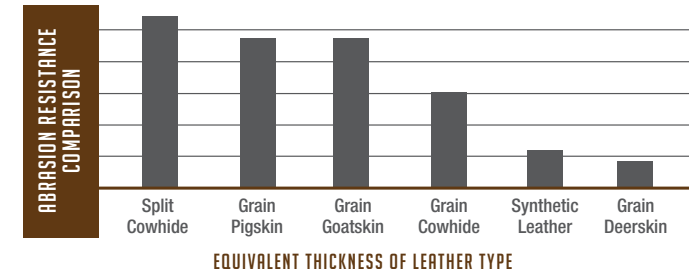

- Economical grain leather choice
- Higher abrasion, puncture and water resistance than other leather
- Flexible after repeated wetting

LEATHER WEAR AND PERFORMANCE

Abrasion resistance is most critical to the longevity of a work glove, since constant rubbing caused by repetitive motion is by far the most common force encountered. That's why we test our leathers for performance characteristics as illustrated in the chart shown. For true abrasion comparisons, equivalent weights or thickness of leather need to be tested.

Many leather gloves, in order to achieve greater tactile sensitivity or flexibility, are made from a "thinner" or "shaved" leather thereby reducing their abrasion performance. There can be many misconceptions regarding leather performance when leather thickness is not considered. Gloves are routinely made from different thickness leather in order to satisfy specific glove performance requirements at the expense of abrasion ability.

LEATHER WEAR AND PERFORMANCE (CONT'D)

Wells Lamont is a proud member of the BLC, British Leather Centre. The BLC is the leading leather technology center offering a multitude of services, including leather testing, to companies in over 40 countries. We routinely test our leather gloves through the BLC to insure that our leather gloves achieve the standards and quality levels that we expect for our customers.

COMMON WORK GLOVE LEATHER PHYSICAL PERFORMANCE CHARACTERISTICS:

(for equivalent thicknesses of natural leather)

TYPE	ABRASION RESISTANCE	PUNCTURE RESISTANCE	TENSILE STRENGTH	BREATHABILITY	TACTILE FLEXIBILITY	SENSITIVITY	INSULATION ABILITY	MOISTURE RESISTANCE	RELATIVE COST
Grain Pigskin	Best	High	Good	Best	High	High	Low	Best	Low
Grain Cowhide	High	Best	High	Fair	Good	Good	Good	Fair	Mid-range
Split Cowhide	High	Best	High	Fair	Fair	Fair	Good	Fair	Low
Grain Deerskin	Fair	Fair	Best	Fair	High	High	Best	Better	High
Split Deerskin	Fair	Fair	Fair	High	Best	Best	Good	Good	Mid-range
Grain Goatskin	High	High	High	Fair	High	High	Low	Good	Mid-range
Synthetic Leather	Fair	Fair	Good	Good	Best	Best	Good	Fair	Mid-range

NOTE: This table is meant to give you a general indication of how various types of leather perform in relation to each other during standard testing.

TYPICAL USE APPLICATIONS:

APPLICATIONS	GRAIN PIGSKIN	GRAIN COWHIDE	SPLIT COWHIDE	GRAIN DEER/ELK	GRAIN GOATSKIN	SYNTHETIC LEATHERS	COATED KNITS
Framing, carpentry, roofing	Good	Best	Fair	Good	Good	Good	Fair
Maintenance, dry surface cleaning	Better	Good	Good	Best	Better	Good	Fair
Demolition, rough labor	Good	Better	Best	Fair	Fair	Fair	Good
Equipment operation	Good	Good	Fair	Best	Better	Better	Fair
Heavy machine operation	Good	Better	Best	Good	Good	Fair	Fair
Landscaping	Best	Good	Better	Fair	Good	Good	Good
Hand tools, pistol grips, assembly	Good	Good	Fair	Better	Better	Best	Fair
Parcel delivery, warehouse work	Good	Better	Good	Good	Better	Good	Best
Transportation	Good	Good	Fair	Best	Good	Better	Fair
Low abrasion operations	Good	Fair	Fair	Good	Better	Best	Fair
High abrasion operations	Better	Good	Best	Fair	Better	Good	Good
Fencing	Good	Better	Best	Fair	Good	Fair	Fair
Rigging	Better	Good	Good	Good	Best	Better	Fair
Materials handling	Better	Better	Better	Fair	Good	Good	Best

NOTE: Recommendations shown above are for better types of work gloves. Jersey, canvas, and other textile gloves are suitable for a very broad range of light duty tasks. For recommended uses of liquid proof and chemical resistant gloves, please refer to tables on pages 40-41.

PHYSICAL PERFORMANCE GUIDE

LATEX RUBBER

Latex, or natural rubber, has excellent abrasion, cut and tear resistance as well as outstanding grip and temperature resistance from 0-300 degrees F.

- However, natural rubber has poor flame resistance. It is not recommended where resistance to oil, grease or petroleum solvents is required.
- Latex will withstand all liquids that mix with water, making unsupported types especially suited for general household use. Heavier versions will resist common furniture strippers without sacrificing grip or tactile sensitivity.
- Coated versions have crinkle finishes, making them the best choice for handling sharp-edged materials like glass and sheet metal, as well as lumber, stones and concrete.

NEOPRENE

Neoprene protects from a broad range of chemicals and is one of the best coatings for strong alkalis and acids. Neoprene has excellent tactile strength and resembles natural latex in flexibility, but is much more chemical resistant and impermeable to gases, vapor and moisture.

- Neoprene performs well in temperatures from 0-300 degrees F, resists herbicides and pesticides, common farm chemicals; oils and a very broad range of alkalis and acids in degreasing.
- Petrochemical, metal fabrication, plating, galvanizing and general material handling are suitable applications for neoprene in its coated form.

NITRILE

A synthetic rubber that provides excellent resistance to a very wide range of solvents and hazardous chemicals; also resists punctures, cuts, snags and abrasion. Nitrile protects against oils, greases, acids, caustics, herbicides, pesticides, kerosene, naphtha, alcohols, turpentine, tung oil and many petroleum products.

- Nitrile gloves have better cut and abrasion resistance than neoprene and PVC gloves, and are considered an excellent general-purpose product. Nitrile functions well in temperatures ranging from 25-300 degrees F.
- Unsupported applications include common farm and garden protection, industrial painting, cleaning and maintenance, and automotive use.
- Nitrile gloves provides outstanding flexibility and abrasion-resistance.

PVC

PVC provides excellent economical resistance to most oils, acids, fats, caustics and petroleum hydrocarbons in addition to outstanding abrasion resistance in its heavier forms.

- PVC gloves are useful in alcohols and glycol ethers, but not aldehydes, ketones, aromatic hydrocarbons, halogen compounds, heterocyclic compounds or nitro compounds. PVC performs well in temperatures ranging from 25-150 degrees F.
- Our disposable gloves will provide only short term protection. They are best suited for painting, hair care, food handling and dish washing.
