

SCREWDRIVERS AND NUT DRIVERS

No toolbox would be complete without an assortment of screwdrivers. Stanley® Proto® has a complete line of professional screwdrivers in enough shapes, sizes, and tips to turn any screw. We make Slotted, Cabinet, Torx®, and Phillips® tips, with both round and square shanks. We also offer a selection of screwdriver sets and accessories.

Stanley® has always been an innovator in screwdrivers. In the 1930's we pioneered the use of cross grinding for slotted screwdriver tips, a technique that produces crossed ridges on the tip that keep the screwdriver from climbing out of the slot when in use. Today, we still cross-grind our standard and cabinet tips for a consistent fit.

All of our screwdrivers feature alloy steel shanks that have been heat-treated along their entire length to add strength during high-torque twisting actions.

Our latest innovation is Proto's line of fully insulated 1000 volt tools, which includes screwdrivers in a variety of types and sizes. They're recognizable by their thick layer of orange

plastic insulation, which wraps around the shank as well as the handle, and will protect users against shock when working on live circuits of up to 1000 V AC and 1500 V DC. All of these tools are individually tested and checked. To help users keep their grip, they also include handles with extended contact areas that reduce pressure on the palm.

Where a sure grip is an absolute must, choose Super Proto® Screwdrivers. These are available as part of our Phillips® and slotted screwdriver lines, and feature bi-material, non-slip handles that keep them securely in the user's hand.

Our nut drivers come in standard and hollow shaft designs, with hex openings that are precision formed to fit snugly on fasteners. Large, fluted handles provide a comfortable grip and greater turning power, and are color coded for easy identification. Our nut drivers include the same durable, heat-treated shanks as our screwdrivers, and are chrome plated to protect them from corrosion. It's the same level of care that we put into all of our professional tools.

Phillips® is a registered trademark of Phillips Screw Co.
Torx® is a registered trademark of Textron.

PRODUCT FEATURES AND BENEFITS

FACOM® INSULATED SCREWDRIVERS

Stanley Proto® offers a broad line of Facom® Insulated Screwdrivers. These tools have been designed to help protect users from shock when working on live circuits. They are easily identifiable by their thick layer of orange plastic insulation, which will help protect users from shock when working on live circuits of up to 1000 volts AC and 1500 volts DC.

Operations performed under live voltage are becoming more common in industrial settings, while on-the-job safety is a growing concern for workers and employers alike. The Facom® 1000-Volt insulated tool line, specifically insulated screwdrivers address both those concerns.

The Facom® VE Series insulated screwdrivers are designed for craftsmen who install and maintain standard electrical equipment and wiring, such as that found in buildings. These tools combine ergonomic design and ease of use with the safety requirements needed for working on or near live components.

The insulated screwdrivers have been individually tested and checked before being shipped. They can be purchased individually or in sets.

STANLEY
PROTO®

SAFETY TIPS

- Use safety goggles. Serious eye injury is possible.
- Keep tools clean. This will prevent them from slipping out of your hand.
- Never use a screwdriver on a workpiece held in your hand. A slip can cause serious injury. Put it in a clamp or vise.
- Never use a screwdriver with a broken or split handle. Replace it.
- Choose a tool with a handle that fits your hand and won't slip.
- Though you may have to bear down on the screwdriver to firmly seat its tip in the screw head, remember that screws are driven by torque, or turning power, not by pressure.
- Always use a properly sized screwdriver tip. A tip that's too narrow can strip the screw head. An overly wide head can damage the work.
- Never use a screwdriver as a pry bar, punch, chisel or can opener, this can cause serious injury.
- Never use a screwdriver with a round tip or round edges, the screwdriver could slip and damage the work.
- Do not sharpen a screwdriver, as this can reduce the hardness of the blade.
- Never use a screwdriver to check electrical currents.
- Never use pliers to get extra turning power from a screwdriver. Only a wrench should be used on screwdrivers with square shanks.
- Only redress a round blade tip if you know how to do it correctly.

SET NO. J61909HS - 3 PC. NUT SETTER SET—1/4" HEX SHANK

- Proto® TorquePlus™ design is a high performance drive configuration which allows for quick and easy engagement to the fastener flats, not the corners.
- The TorquePlus™ configuration employs a radius-corner design, shifting contact area and stress away from the fastener corners and distributing contact stresses over a large area of the socket, minimizing slippage.
- The TorquePlus™ internal design minimizes fastener rounding, helps to extend fastener life, and allows the user to more easily turn worn, rounded, or rusted fasteners.
- Magnets feature enhanced holding power to help improve fastener retention, helping to increase productivity.
- Distinctive gold finish.
- Weight: 0.21 lbs.
